

I respectfully urge the Federal Communication Commission to reject the National Broadcaster's petition 04-160 on the basis of consumer choice. XM Satellite Radio is an excellent option for music, talk, roadway and weather information. It is an "all-in-one" option that is not available elsewhere. XM Satellite Radio should be viewed as an innovative leader and not as a threat to other broadcasters. I would think that XM Radio would be an incentive for other broadcasters to improve their offerings and "raise the bar" to compete with XM Satellite Radio.

Again, I urge a rejection of NAB's petition 04-160.
